AI/ML Stock Screening System

Historical SMMA crossover data is used to train a Random Forest model.

The model evaluates current market features and produces a probability-based decision.

🧠 AI/ML Decision Explanation

● ITC.NS — WATCH | ML probability: 54.99%

The model detects a potentially profitable setup, but confidence is below the 70% threshold. The signal is therefore not accepted as a high-confidence trade.

● NTPC.NS — WATCH | ML probability: 69.23%

The model detects a potentially profitable setup, but confidence is below the 70% threshold. The signal is therefore not accepted as a high-confidence trade.

● POWERGRID.NS — BUY | ML probability: 75.00%

The predicted probability is above the 70% decision threshold. The model therefore accepts the signal for further consideration.

● ONGC.NS — NO TRADE | ML probability: 46.62%

Model confidence is below the required threshold. The system avoids this signal.

₹30 – ₹500

SMMA Indicators

ONGC.NS — NO TRADE | ML probability: 49.92%

Model confidence is below the required threshold. The system avoids this signal.

COALINDIA.NS — WATCH | ML probability: 64.18%

The model detects a potentially profitable setup, but confidence is below the 70% threshold. The signal is therefore not accepted as a high-confidence trade.

ML Probability by Stock

Stock	ML Probability (%)
ONGC.NS	49.92

📊 Historical Model Performance

Strategy	Trades	Win Rate %	Average Return %	Total Return %
Random Forest ML	17	41.1765	-0.9514	-16.1733
ML High Confidence >=70%	4	75	0.104	0.4162

🎯 High-Confidence Strategy

The project evaluates a stricter ML strategy using a 70% probability threshold.

This is intended to reduce the number of trades and focus on signals where the model has higher confidence.
